

ABSTRACT

5

Antisense compounds, compositions and methods are provided for modulating the expression of human collapsin response mediator protein 2. The compositions comprise antisense compounds, particularly antisense oligonucleotides, targeted to nucleic acids encoding human collapsin response mediator protein 2. Methods of using these compounds for modulation of human collapsin response mediator protein 2 expression and for treatment of diseases associated with expression of human collapsin response mediator protein 2 are provided.
